

Meta-Forensics Aggregation Audit

Table of contents

1 Scope	1
2 Load Outputs	1
3 Interpretation Key	2
4 Category Contribution Table	2
5 Category Score Plot	2

1 Scope

This report aggregates category-level forensic summaries into an evidence-burden triage aid for human review. It is not an automated assessment of study quality, validity, or misconduct.

2 Load Outputs

```
repo_root <- normalizePath("../", winslash = "/", mustWork = TRUE)
study_id <- Sys.getenv("FORENSICS_STUDY_ID", "lungtime")
report_dir <- file.path(repo_root, "reports", "meta", study_id)

required <- c("meta_category_scores_out.csv", "meta_overall_summary.csv")
missing <- required[!file.exists(file.path(report_dir, required))]
if (length(missing) > 0) {
  stop("Missing files: ", paste(missing, collapse = ", "))
}
```

```
scores <- read.csv(file.path(report_dir, "meta_category_scores_out.csv"), check.names = FALSE)
overall <- read.csv(file.path(report_dir, "meta_overall_summary.csv"), check.names = FALSE)
```

3 Interpretation Key

- **anomaly_score** (category): legacy column name for normalized evidence-burden contribution.
- **evidence_burden_score**: weighted combination of category evidence-burden indicators.
- **review_priority**: coarse triage label (**low**, **moderate**, **high**, **insufficient_data**) for human review priority.
- **overall_score** and **risk_tier**: backward-compatible aliases preserved for older consumers.

```
knitr::kable(overall, digits = 4)
```

overall_score	risk_tier	evidence_burden_score	review_priority	n_categories
0.1327	low	0.1327	low	5

4 Category Contribution Table

```
knitr::kable(scores, digits = 4)
```

category	metric	raw_value	anomaly_score	weight
randomization	fisher_recalc	0.8592	0.1408	1.0
numeric	median_abs_percent_delta	0.0333	0.0167	1.0
registration	mismatch_rate	0.1250	0.1250	0.8
visual	near_duplicate_rate	NA	0.0000	0.8
transparency	transparency_evidence_burden	0.5000	0.5000	0.6

5 Category Score Plot

```

barplot(
  height = scores$anomaly_score,
  names.arg = scores$category,
  col = "gray75",
  border = NA,
  ylim = c(0, 1),
  main = "Category Evidence-Burden Contributions",
  ylab = "evidence burden"
)
abline(h = c(0.2, 0.45), col = "red", lty = 2)

```
